## About Scrawl Pouch

Scrawl Pouch is a staging location for information in iOS 11. You can store photos, map locations, contacts, etc., and retrieve them again later. Pouch is useful for projects where you need a lot of different pieces from many different apps to be assembled into a final project.

Scrawl Pouch takes advantage of iOS 11's drag-and-drop support to integrate with many other apps. Once data is in Pouch, you can drag it back out, find it in Spotlight, copy and paste it, etc. to bring it to its final destination.

## Features

### Quick, Easy Usage

Scrawl Pouch isn't an organization tool; you won't find a bunch of buttons and menus to spend forever fiddling with. Pouch is about getting things done. To that end, Pouch is simple and responsive, allowing you move items in and out of it without having to waste time curating.

### High Availability

Scrawl Pouch is everywhere you need it to be, without getting in your face. Once you've moved something into Pouch, you have multiple ways of getting it back out. Put Pouch in Slide Over for one-swipe access from any app. Or, search for items in Spotlight and drag search results to their destination without ever launching Pouch. If the app you're moving to doesn't support drag and drop, copy items to the clipboard and paste it to the destination app.

## Questions?

For all press questions or interview requests, contact Geoff Pado at [pado@cocoatype.com](mailto:pado@cocoatype.com) or leave a voicemail message at (636) 744-5254.

Download a full press kit containing screenshots, icons, press releases, etc. at <https://pouch.scrawlapp.com/press>.

If you'd like access to beta versions of Scrawl Pouch prior to release, sign up for TestFlight at <https://pouch.scrawlapp.com/boarding>. The release version can be found on the iOS App Store, or by visiting <https://pouch.scrawlapp.com/ios>.
